SUMMARY

Lead Software Engineer with **8+ years** of software engineering experience, specializing in **Node.js**, **TypeScript**, and **AWS** serverless systems. Built **authentication platforms** supporting 60K+ daily active users and delivered **MFA** across 6+ products. Experience leading and mentoring a five-engineer team.

WORK EXPERIENCE

PowerSchool Group LLC **August, 2018 – Present**

Lead Software Engineer | April, 2025 – Present

- Led the development of **Multi-Factor Authentication** (MFA) service using Auth0, to improve security across 6+ products.
- Built a distributed asynchronous workflow using **AWS Lambda**, **EventBridge Schedules**, **SQS**, and **Step Functions** to automate account invitations via **Auth0** for users without accounts, removing manual work.
- Implemented product compliance by removing user data that was deleted in upstream systems, this solution was build using **AWS EventBridge**, **SQS** and **Lambda** functions.
- Built an AI code-review agent that automated review analysis and increased the volume of high-quality PR reviews by 3x.
- Led and mentored a team of five engineers, facilitating engineer ramp-up, resolving blockers, and improving team throughput by 15% as per Jira.

Senior Software Engineer | April, 2022 – March, 2025

- Designed and implemented a centralized (single sign-on) SSO solution using **Auth0** with **OpenID Connect** across multiple products, including custom authentication rules for account metadata persistence. The platform now supports 60K+ daily active users.
- Built Micro-Frontend (MFE) applications for user management and directory using **React** and Webpack Module Federation. Developed a Node.js-based Backend-for-Frontend (BFF) layer backed by **DynamoDB** (**single-table design**), with infrastructure created via **AWS CDK**. These MFEs addressed key product gaps, contributing to a 33% QoQ increase in revenue.
- Developed and deployed REST APIs using the **Serverless Framework**, reducing operational costs by 60% while enabling seamless integration with the UI and third-party services.

- Oversaw end-to-end deployment of software artifacts to production, streamlining release cycles and achieving a 10% reduction in deployment-related issues.

Software Engineer | April, 2020 – March, 2022

- Wrote and maintained unit and integration tests using **React Testing Library** and **Jest**, increasing test coverage by 40% and improving overall code quality and stability.
- Improved application observability by integrating **New Relic**, improving our response time to production issues significantly.

Associate Software Engineer | August, 2018 – March, 2020

- Designed and maintained a **Kafka**-based event-driven ETL pipeline for real-time data synchronization and idempotent bulk provisioning across multiple PowerSchool products.

EDUCATION

Dayananda Sagar College of Engineering **2014 – 2018**
Bachelor of Engineering in Computer Science *Bengaluru, Karnataka*

SKILLS & INTERESTS

- **Languages:** TypeScript, JavaScript, SQL
- **Backend:** Node.js, REST APIs, Microservices, Event-Driven Architecture, Distributed Systems
- **Frontend:** React, Webpack Module Federation
- **AWS:** Lambda, SQS, EventBridge, Step Functions, DynamoDB, CloudFront, Secrets Manager, CloudWatch, CDK, RDS
- **Authentication:** Auth0, OAuth 2.0, OpenID Connect, JWT, Authentication & Authorization
- **Testing & Observability:** Jest, React Testing Library, New Relic
- **DevOps:** Docker, GitLab CI/CD, GitHub Actions
- **AI Development:** GitHub Copilot, Cursor, Agentic development
- **Others:** Kafka, Redis
- **Interests:** Hiking, motorcycling, chess, travelling, reading.
